

- Around 15+ **years** of experience in IT technology space and 8+ **years** of extensive experience with Container technology (**Docker** / **Kubernetes** and **OpenShift**).
- Leveraged AI coding assistants including **Claude** and **OpenAI Codex** to accelerate day-to-day DevOps, SRE, Infrastructure as Code (Terraform), Python automation, and Kubernetes operations.
- Integrated **Model Context Protocol (MCP)** servers with enterprise infrastructure including Kubernetes, New Relic, Terraform, GitHub, enabling AI-assisted troubleshooting, infrastructure analysis, and operational workflows.
- Built AI-assisted automation for infrastructure provisioning, Kubernetes resource management, Terraform module development, incident troubleshooting, and operational runbooks using Python, Bash, and Terraform.
- Used AI agents to analyze **Kubernetes** events, application logs, metrics, ingress configurations, and cloud infrastructure to reduce mean time to resolution (**MTTR**) during production incidents.
- Developed Infrastructure as Code faster by using LLM-assisted generation and validation of Terraform modules, Helm charts, Kubernetes manifests, Python utilities, and automation scripts.
- Accelerated root cause analysis by combining AI with observability platforms including New Relic, Kubernetes, cloud logs, and infrastructure telemetry.
- Used AI to generate, review, refactor, and validate infrastructure code while ensuring adherence to organizational security and operational standards.
- Built repeatable AI-assisted operational workflows for **Kubernetes upgrades**, ingress migrations, cloud infrastructure changes, disaster recovery exercises, and platform modernization initiatives.
- Improved engineering productivity by using AI for documentation, architectural design reviews, operational runbooks, troubleshooting guides, and infrastructure knowledge sharing.
- Evaluated emerging AI capabilities including MCP ecosystem integrations, agentic workflows, and AI-assisted **DevOps automation** to improve platform reliability and operational efficiency.
- Cloud/On-premises Architecture and Administration Container technology using **OpenShift Container Platform** (PaaS). Cloud/On-premises DevOps Architecture and Administration Container technology.
- Docker Enterprise edition (CaaS)-Docker Data Center (UCP & DTR) installation & Docker Swarm/Kubernetes cluster management for Docker containers.
- Installing and configure Redhat **OpenShift** clusters using **Ansible** playbooks and played cluster admin & DevOps roles to taken care **OpenShift** platform in AWS cloud (EC2/Cloud formation/Security groups/IAM roles) and On-Prem data centers (Paas).
- **AWS** infrastructure as code experience dealing with **EC2, S3, IAM, Lamda and RDS**.
- **CICD** pipeline creation in **AWS** environment using Ansible/Terraform and continuous deployment enable using code-deploy.
- Proficient in **Bash and python scripting** where automation required to make successful infrastructure as code (IAC).
- Install & configure **Ansible** and wrote playbooks (play, roles, role structure) to automate the infrastructure deployments.

- Created custom docker images for Containerized tomcat and IBM WebSphere Liberty for production use.
- Good experience in infrastructure design, operational support and development of highly scalable, high availability, mission critical applications. Strong technical skills, decision-making and problem-solving abilities.
- MiddleWare Engineer with 9+ years of experience in Application Server administration (**Weblogic 12c,11g&10g, WAS 9.x/8.5.x/8.x/7.x and JBoss 5.x/6.x**).
- Sound Knowledge on migrating J2EE applications from WebLogic/JBoss to WebSphere Application Server in MiddleWare Space.
- Extensively worked on **WebLogic/WebSphere/JBoss Application Servers** as administrator for Server Configuration, Deployment of components and performance tuning including troubleshooting and maintenance.
- **WebLogic/WebSphere/JBoss** installation 3 modes - GUI, Console and Silent mode. Configuration templates for various environment-based installations.
- Extensive working experience in setting up multiple domains, including machines, managed servers, node managers and cluster environments.
- Extensive working experience in setting up multiple cells, including nodes, app servers, node agents and cluster environments.
- Proficient in deployment and troubleshooting of JAR, WAR, and EAR files in domain and clustered environments of **WebLogic/WebSphere/JBoss** Server.
- Provided infrastructure software for Service Oriented Architecture (SOA).
- Strong experience in configuring and troubleshooting **WebLogic/WebSphere/JBoss** Server issues in production, production-fix and testing environment.
- Configured remote JMS to MQ/EMS providers/foreign servers.
- Expertise in administration of Apache **HTTP 2.0** Web Server, WebSphere Apache Server.
- Proven skills in troubleshooting, performance monitoring and performance tuning of **WebLogic/WebSphere/JBoss** servers.
- Working knowledge with **MQ series** and SiteMinder.
- Expertise in creating **cron jobs** for timely running of jobs.
- **WebLogic/WebSphere/JBoss** Administration, **Monitoring** and Troubleshooting using Admin Console and JMX.
- Good at Server **Performance Tuning** - Thread Dump Analysis, Core Dump Analysis when Server crashed unevenly.
- Experience with monitoring & integrating application with **App Dynamics/HP Diagnostics**.
- Worked on Web Security tools- **LDAP Server, SSL** Certificates.
- Worked on security realm – Creating security **roles**, group policy, user authentication, auditing and authorization.
- Experience in full Software Development Life Cycle. (Analysis, Design, Development and Testing)
- Proficient in developing **UNIX Shell**, PL/SQL and SQL scripts.
- Proven ability to define System requirements, recommending solutions, analyze capacity and makes appropriate modifications.
- Strong experience with Windows, Sun Solaris, Red Hat Enterprise Linux, and HP-UX platforms.

Technical Skills:

Container Platform : AWS EKS, IBM Cloud Kubernetes 1.xx, OpenShift (OCP) 3.x (3.11.x, 3.10.x, 3.9.x), Docker DDC 3.x and 2.x

Web/App Servers : WebLogic Application Server 8.x/9.x/10.x/11g/12c, WebSphere Application

Server 7.x/8.x.x/9.x, JBoss 4.x.x/5.x.x/6.xx, Apache, Tomcat, iPlanet/Sun One, IIS 4.0/5.0/6.0, SharePoint Portal, Biz Talk Server 2000

Operating Systems	: Solaris 8/10, RedHat Linux 5.x/6.x/7.x, Windows 7/2012/2016, AIX 5.x, HP-UX
Scripting	: Shell, WLST , wsadmin , ANT, Jython , Python, WLSHELL, Perl.
HA/Monitoring	: F5-Big IP , NetScalar, AppDynamics, HP Openview, HP SiteScope.
Databases	: Oracle 9i/10g/11g/12c, DB2, MS SQL Server, TeraData, MangoDB.
Technologies	: J2EE , Servlets 2.x, Applets, Swings, EJB, JMS, JDBC/ODBC, JNDI, RMI, JSP 1.2, EJB 2.x/3.x, JAAS, XML, HTTP.
Security Software	: Oracle Access Manager , CA SiteMinder, Sun JES Identity Manager/Access Manager.
Languages	: Java 2, C, C++, SQL and PL/SQL
Other Tools	: MS Project, Win Runner, Load Runner, Autosys.
Networking	: Http, Https, IIOP, T3, T3S, FTP, LDAP, TCP/IP, SSL, VPN, IDS.

BenchPrep
Lead DevOps/SRE Engineer
Feb 2022 – Till Date

Responsibilities:

- Lead and mentor the DevOps/SRE team while remaining a **hands-on engineer** responsible for day-to-day production operations.
- Spearheaded adoption of **AI-assisted DevOps practices** by integrating **Claude**, **OpenAI Codex**, and Model Context Protocol (MCP) servers into daily infrastructure engineering workflows.
- Designed AI-powered operational workflows leveraging MCP integrations with Kubernetes, Terraform, New Relic, GitHub, and cloud platforms to automate troubleshooting, infrastructure analysis, and operational tasks.
- Built **AI-assisted automation** using Python, Terraform, and Bash for **Infrastructure as Code**, Kubernetes operations, incident response, platform migrations, and production troubleshooting.
- Accelerated operational investigations by using **LLMs** to analyze Kubernetes events, application logs, infrastructure state, Terraform configurations, and observability data, reducing engineering effort and improving troubleshooting efficiency.
- Design and architect highly available cloud infrastructure across **AWS** and IBM Cloud.
- Lead Kubernetes platform engineering, including cluster operations, networking, ingress, security, upgrades, and ecosystem management.
- Implement and operate **GitOps**-based continuous delivery using Argo CD, improving deployment consistency and operational reliability.
- Design, implement, and maintain **CI/CD pipelines** while leading platform modernization and infrastructure migrations.
- Serve as the primary technical resource for infrastructure architecture, Kubernetes, cloud platforms, and security-related initiatives.
- Plan, implement, and maintain networking, Kubernetes clusters, virtual machines, and bare-metal infrastructure to ensure platform scalability and resilience.

- Lead infrastructure projects and coordinate with vendors, auditors, and cross-functional engineering teams to deliver enterprise-grade platform solutions.
- Drive proactive improvements to platform reliability, security, scalability, and operational efficiency through automation and engineering best practices.

Environment: AWS EKS, AWS EC2, AWS S3, AWS DynamoDB, Helm 3.x, Helm 2.x , Terraform 0.1x-1.0, IBM Container Registry, Docker-Desktop, Docker Registry, github, Newrelic, Sematext, Claude, Codex, Model Context Protocol(MCP), Claude Skills, AI-Agents

BenchPrep
Senior DevOps/SRE Engineer
Oct 2019 – Feb 2022

Responsibilities:

- Cloud Architecture and Administration Container technology using **IBM Kubernetes Service**.
- Kubernetes cluster setup for micro services in IBM Cloud.
- Install & configure **Ansible** and wrote playbooks (play, roles, role structure) to automate the infrastructure deployments.
- AWS infrastructure as code experience dealing with EC2, S3, IAM and DynamoDB.
- CICD pipeline enable using **GitHub**, **Codship**, **Ansible** and **Terraform** tools.
- Proficient in Bash and Python scripting where automation required to make successful infrastructure as code (IAC).
- Written multiple Docker compose and **Kubernetes Helm** templates(yaml) files for automatic deployments.
- Migrating all Helm 2.x templated to 3.x templates without causing any downtime.
- Configured **NewRelic** agents in integration, staging and production clusters to send Kubernetes alerts to slack notification channels via NewRelic cloud platform.
- Configured log agent to ship logs to **Sematext** cloud.
- Maintained IBM Kubernetes version life cycle with up to date patches in the environments.
- Configured Threat stack agents in IBM cloud kubernetes servers and IBM classic infrastructure for bare metal database servers to identify security vulnerabilities and applied strong security rules.
- Designed and created Architecture diagrams for end to end infrastructure .
- Good hands-on experience with Kubernetes(K8's) **POD autoscaling(HPA)**.
- Good hands-on experience with **Kubernetes node auto scaler** component.
- Good understand of AWS cloud products and troubleshooting skills for EC2, S3 related AWS components.
- Done Various product POC's for container technologies in IBM Cloud and AWS.
- Created CICD pipelines satisfy the Agile methodology followed by Dev teams.

Environment: IBM Cloud IKS, AWS EC2, AWS S3, AWS DynamoDB, Helm 3.x, Helm 2.x , Terraform 0.1x-1.0, IBM Container Registry, Docker-Desktop, Docker Registry, github, Newrelic, Sematext

Novisys LLC (Client: United Airlines, Chicago, IL).
Senior Middleware/DevOps Engineer
July 2017 – Oct 2019

Responsibilities:

- Cloud/On-premises Architecture and Administration Container technology using **Docker EE (DDC)** and **OpenShift Container Platform (PaaS)**
- **Docker Enterprise edition (CaaS)**-Docker Data Center (UCP & DTR) installation & Docker Swarm cluster enable for micro services.
- Installing and configure Redhat **OpenShift** cluster using Ansible scripts and played cluster admin role to take care OpenShift platform in AWS cloud and On-Prem data centers (Paas).

- Install & configure **Ansible** and wrote playbooks (play, roles, role structure) to automate the infrastructure deployments.
- **AWS** infrastructure as code experience dealing with **EC2, S3, IAM, Lambda and RDS**.
- CI/CD pipeline creation in **AWS** environment using Ansible/Terraform and continuous deployment enable using code-deploy.
- Proficient in Bash and python scripting where automation required to make successful infrastructure as code (IAC).
- CI/CD pipeline integration with Jenkins, TFS, Teamcity and CA Release automation for various Middleware products (NodeJS/Tomcat/WebSphere/WebLogic/JBoss/Apache WebServer)
- Written multiple docker compose and Kubernetes helm templates(yaml) files for automatic deployments.
- Configured **datadog** agents in production clusters to send OpenShift alerts to **datadog**.
- Created and maintained AWS cloud formation/code pipeline scripts to create OpenShift prerequisites (Security groups/bastion host/master hosts/infra hosts/generic asg/iam keys/iam policies/storage).
- Maintained OpenShift RPM repos in Oracle Spacewalk server and Redhat docker repo in artifactory.
- NodeJS installation and administration using PM2. Automated NodeJS deployments with Ansible for continuous integration.
- Closely working with multiple Dev teams on various tools for automating deployment process and guided them with best practices.
- Good hands-on experience with Kubernetes(K8's) auto scaling for docker containers.
- Good hands-on experience with OpenShift platform (Installation and scaling in AWS Cloud and On-Prem Data centers).
- Good understand of AWS cloud products and troubleshooting skills for OpenShift related AWS components.
- Done Various product POC's for container technologies in Cloud (ECS/EKS/OpenShift) & On-Prem (OpenShift/kubernetes/Docker EE).
- Created CI/CD pipelines to. Satisfy the Agile methodology followed by Dev teams.

Environment: OpenShift (OCP) 3.x (3.11.x, 3.10.x, 3.9.x), Docker DDC 3.x and 2.x, WebLogic Application Server 8.x/9.x/10.x/11g/12c, WebSphere Application Server 7.x/8.x.x/9.x JBoss 5.x.x/6.x.x, AWS EC2/EFS/

Novisys LLC (Client: United Airlines, Chicago, IL).

Senior Middleware Engineer

Jan 2013 – June 2017

Responsibilities:

- Developed a whole lifecycle in WebLogic/WebSphere/JBoss Server environment from development to production.
- Written WLST Scripts for Data sources, JMS and Authenticators and ran the script successfully.
- Written wsadmin scripts for Data sources, JMS and Authenticators and ran the script successfully.

- Configure and administer WebLogic/WebSphere/JBoss JDBC Data Sources with Oracle RAC database.
- Deploying enterprise app components in WebLogic/WebSphere/JBoss Server and integrating with third party utilities, like Unica/RTD.
- Involved in BigIP-F5 load balancer configuration for server environment.
- Server log and Domain log monitoring, Application Deployment, and performance tuning of WebLogic/WebSphere/JBoss. Setting the JVM parameters like maximum and minimum heap size in WebLogic/WebSphere/JBoss startup scripts
- Extensively worked on WebLogic/WebSphere/JBoss Application Servers as administrator for Server Configuration, Deployment of components and performance tuning including troubleshooting and maintenance.
- Involved in Disaster Recovery and Production-Fix environment build and integrated it with Apache webserver.
- Experience in supporting WebLogic/WebSphere/JBoss Server env in Testing and Production environments.
- Experience in monitoring the application servers with the help of Sitescope and also by writing UNIX scripts that will send an email/page whenever something fails.
- Configuring Clusters on WebLogic/WebSphere/JBoss using the WebLogic/WebSphere/JBoss Console/Command Line.
- Deploying and configuring in various environments like Production, Staging and Testing on a single Server and a cluster of Servers also I used to trouble shoot the deployment issues.
- Created custom authenticators for application usage under security realm.
- Configured and maintained the WebLogic/WebSphere/JBoss Load balancing Clusters.
- Fine Tuned the JDBC Connection Pools Initial and Maximum Capacity to the same value in production systems to avoid creating new connections on the fly during load spikes.
- Interacted with Development Teams for Application Architecture changes, with respective to WebLogic/WebSphere/JBoss configurations.
- Took Thread Dumps when any issues come in WebLogic/WebSphere/JBoss, and I used to analyze the thread dumps and used to communicate with developers to solve the issues.
- Maintained Queues, Topics, in WebLogic/WebSphere/JBoss JMS Server.
- Monitor the WebLogic/WebSphere/JBoss Execute Queues, JMS Queues.
- Involved with troubleshooting the Applications to detect and eliminate the Memory Leaks.
- Automated and scheduled backups on all UNIX machines using shell script
- Writing UNIX shell scripts (start & stop) for web application server administration.

Environment: WebLogic Application Server 8.x/9.x/10.x/11g/12c, WebSphere Application Server 7.x/8.x.x, JBoss 4.x.x/5.x.x, , F5 Load Balancer, JMX, LDAP, Java,J2EE, Oracle 11g RAC, Oracle Super Cluster, Shell scripting, WLST, ANT, HPSA, WSADMIN.

Novisys LLC (Client: United Airlines, Chicago, IL).
Ecommerce Middleware Engineer
June 2010 – Dec 2012

Responsibilities:

- Developed a whole lifecycle in WebLogic/WebSphere/JBoss Server environment from development to production.
- Written WLST Scripts for Data sources, JMS and Authenticators and ran the script successfully.
- Configure and administer WebLogic/WebSphere/JBoss JDBC Data Sources with Oracle RAC database.
- Deploying enterprise app components in WebLogic/WebSphere/JBoss Server and integrating with third party utilities, like Endeca.
- Involved in BigIP-F5 load balancer configuration for server environment.
- Server log and Domain log monitoring, Application Deployment, and performance tuning of Web-

Logic/WebSphere/JBoss. Setting the JVM parameters like maximum and minimum heap size in WebLogic/WebSphere/JBoss startup scripts

- Extensively worked on WebLogic/WebSphere/JBoss Application Servers as administrator for Server Configuration, Deployment of components and performance tuning including troubleshooting and maintenance.
- Involved in Disaster Recovery and Production-Fix environment build and integrated it with Windows IIS webserver.
- Experience in supporting WebLogic/WebSphere/JBoss Server env in Testing and Production environments.
- Experience in monitoring the application servers with the help of Sitescope and also by writing UNIX scripts that will send an email/page whenever something fails.
- Configuring Clusters on WebLogic/WebSphere/JBoss using the WebLogic/WebSphere/JBoss Console.
- Deploying and configuring in various environments like Production, Staging and Testing on a single Server and a cluster of Servers Also I used to trouble shoot the deployment issues.
- Created custom authenticators for application usage under security realm.
- Configured and maintained the WebLogic/WebSphere/JBoss Load balancing Clusters.
- Fine Tuned the JDBC Connection Pools Initial and Maximum Capacity to the same value in production systems to avoid creating new connections on the fly during load spikes.
- Interacted with Development Teams for Application Architecture changes, with respective to WebLogic/WebSphere/JBoss configurations.
- Took Thread Dumps when any issues come in WebLogic/WebSphere/JBoss, and I used to analyze the thread dumps and used to communicate with developers to solve the issues.
- Maintained Queues, Topics, in WebLogic/WebSphere/JBoss JMS Server.
- Monitor the WebLogic/WebSphere/JBoss Execute Queues, JMS Queues.
- Involved with troubleshooting the Applications to detect and eliminate the Memory Leaks.
- Automated and scheduled backups on all UNIX machines using shell script
- Writing UNIX shell scripts (start & stop) for web application server administration.

Environment: WebLogic Application Server 8.x/9.x/10.x, WebSphere Application Server 7.x, JBoss 4.x.x, F5 Load Balancer, JMX, LDAP, Java, J2EE, Oracle 10g RAC, Shell scripting, WLST, ANT, HPSA.WSADMIN.
